

# Project objectives

It is a note taking app, made for efficient usability. For one, using the keyboard to navigate is faster than using the mouse. Also it should be stable and predictable; therefore it should be plain text (using markdown or org mode). At the same time, it should be compatible with traditional paradigms (like using the mouse).

## Deliverables

- It must work on Linux and Windows
- It has the following features:
  - Notes can be made quickly (without a filename)
  - It must be fully navigable with the keyboard

## Schedule

Task	Timeframe
Make GUI	2 days
Make text field	1 day
Make functions that react to key-presses	3 days
